OFFENDERS SUBJECT TO ARREST AND PROSECUTION

AirportIQ Secure Credentials (ASC)
GCR's ASC is a fully-integrated credentialing solution that manages biometric credentialing, badging, continuous vetting, auditing, and access management.

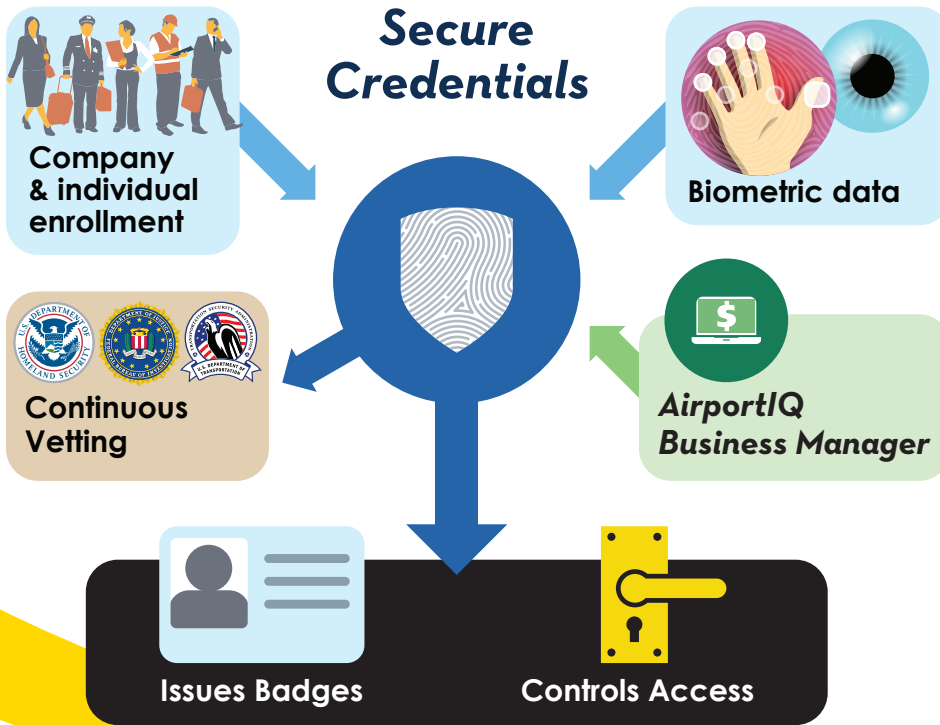

SECURITY

ASC provides the industry's first secure credentialing solution that integrates with your business management software to ensure accurate contract compliance.

"ASC gives you full control over who you grant access to, and where they are allowed to be, while constantly checking badge holders' backgrounds for crucial information."

- Tim Walsh
GCR Associate V.P.

Imagine the new state-of-the-art business management software which alerts your credentialing office when a contract has expired or when a lease-holder is in violation – thus assuring badges are accounted for and retrieved.

Now imagine that a smaller airport with 500 badges can have the same continuous vetting and credentialing software that integrates with your access control system, and at an investment you can afford.

Our **AirportIQ Secure Credentials** can provide this for your airport today.

ASC core capabilities:

- Issues a trusted, biometrically enabled, aviation worker security credential
- Performs applicant vetting and adjudication management with federal and state agencies
- Manages security access privileges and integrates with a variety of physical access control systems
- Allows badge holder management for authorized signers via a secure, web-based self-service app
- Performs comprehensive regulatory reporting and performance analysis
- Handles automatic badge billing
- Offers robust badge auditing capabilities, including self-audit for tenant compliance
- Enterprise level contract and surety management through integration with AirportIQ Business Manager (ABM)
